

“We are very proud to announce our new distribution agreement with ANVIL, says Sepi Karandish, founder of TO Packaging, in Thousand Oaks CA. These cases have been around since the mid fifties and were originally built for traveling musicians once they turned to electric instruments and sound systems.”

Anvil built the first case for an orbiting satellite, and cases to house delicate medical equipment that demanded stringent, hermetically sealed weatherproofing. When the New York Yankees approached Anvil to build a safe with 60 lockable boxes that would hold the team’s valuable championship rings, Anvil delivered. Industry giants from film, corporate America and the U.S. Military have been Anvil’s loyal clients for decades.

“We do a lot of custom crating for the aerospace, military and medical professions and ANVIL™ cases allow us to offer more sophisticated, customized, durable and reusable options to our clients,” offers Cliff Dew, TO Packaging’s New Business Manager. We’re excited about this opportunity because ANVIL™ provides us with immediate brand recognition for transportable containers, while opening new doors for us with clients in the medical, aerospace and commercial industries.”

Anvil is at the forefront of developing new, lighter, and stronger materials for the 21st century. With three manufacturing facilities throughout the USA, the Anvil team represents the largest fabricated case manufacturer in the world. Through the years Anvil has become known worldwide as “the best protection your money can buy.” There is not a single arena of industry that Anvil does not serve
